Health Policy: Health Policy is refers to the pans that are start and launched to achieve health care goals within the society. The same factors are there which I pointed up some factors in the Education Policy. These factors are: ? Health Development ? Health Care Fees and Cost ? Quality of the Health Care Check-up ? Planning Techniques of the Health Care System As, nowadays, there are private hospital as well as government hospital. As usually the same problem with the hospitals that I was explained in the Education Policy institutions. Criminal Justice Policy: This is made just to have a justice in the society and check that the criminal goes to jail even he is a Prime Minister of Pakistan or he is a part of the political parties or he is part of the Criminal Organization. This policy should be made to provide justices to the people who didn't get a justice in the society. This policy is also made to check that no criminal is living freely in the society because if he or she live freely, then he or she would be dangerous to others. These seven policies should be implemented in the society so that they would be check of balance in each parts of the people's life in the society and trying different to overcome or stop the inequality that would become hell to the people. Before inequality would ruined another life in the society, we should implemented these policies in the society. Inequality is sometimes that two peoples is not getting the equal things in the income, education, health care, rights and justice at the same things. 13 This is main concern in the society because we live in the society where rich people get every quality things in their life including justices and rights. But poor people didn't get any things including justice and rights. We also should stand up for peoples who didn't get any things including justice and rights so that we can finished the inequality that what we had started. That why's these policies should be designed to legislate away various forms of inequality.
